**Ferrous Bisglycinate Elemental Iron 60 mg , Zinc Bisglycinate Elemental Zinc 15 Mg,
Folic Acid 1 mg & Methylcobalamin 500 mcg Tablets**

Ferrous Bisglycinate : It is a chelated form (reaction of ferrous iron with two molecules of the amino acid glycine by a covalent bond) of iron and is absorbed like amino acids by cells of small intestines without the usual irritation and constipation of other forms. Moreover this form of iron is more effectively absorbed and hence is better at supporting nutritional dietary intake.

Zinc Bisglycinate : It is a chelated form (reaction of Zinc with two molecules of the amino acid glycine by a covalent bond) of Zinc. Zinc is called an “essential trace element” because very small amounts of zinc are necessary for human health. Since the human body does not store excess zinc, it must be consumed often as a part of the diet.

Folic Acid : Folic acid is used for preventing and treating low blood levels of folate.

Methylcobalamin : Methylcobalamin is a naturally occurring and pure form of Vitamin B12. It is taken to regulate certain important bodily functions like cell multiplication, blood formation, and protein synthesis. It is used to treat Vitamin B12 deficiency in people with Pernicious Anaemia.

Indicated in.....

- **Anaemia**

CoQ10 :

- Converts food into energy.¹
- Reduces swelling in the legs, enhances breathing by reducing fluid in the lungs, and increases exercise capacity in people with CHF.²
- Improves quality of life in heart patients or cancer patients by:
 - Improving energy production.
 - Inhibiting blood clot formation.
 - Reducing free radical damage through antioxidant action.³
- Improves immunity in people with HIV/AIDS.
- Improves sperm motility.

- Improves mental symptoms of depression and schizophrenia.⁷
- Lowers cardiovascular risks.

Lycopene:

- Prevents free radicals from disrupting the balance of new bone formation with the bone loss that naturally occurs with age.
- Powerful quencher of singlet oxygen, primary cause of skin aging.
- Promotes fertility in men.
- Prevents heart disease, cataract and Age-Related Macular Degeneration (AMD).

DHA (Docosahexanoic acid):

- Essential nutrient, assists brain and eye development of foetus and young children.⁴
- Reduces the chances of preterm labor, preeclampsia and postpartum depression.
- Highly responsible for the beneficial mechanisms by which HRT induces an antiatherosclerotic effect in postmenopausal women.⁵

- Offer the cancer-fighting benefits.⁶

- Protects the eyes by deterring macular degeneration, a major cause of vision loss.⁸

Selenium.

- Promotes antioxidant activity and immunostimulating functions in the body.
- Prevents age related degenerative diseases.

Eicosapentanoic acid:

- Improves the response of patients to chemotherapy, possibly by modulating the production of eicosanoid.⁴
